

Professional Summary

Computer Science student with hands on experience in Cryptography, Computer Security, Operating Systems, Embedded Systems, Machine Learning and AI, as well as using the MERN stack. Proficient in systems programming with strong fundamentals in network security principles, secure coding practices, low-level system architecture and API development.

Education

University of Massachusetts Boston (GPA 3.8)

BS, Computer Science.

Boston, MA

2023 - 2026

Epoka University

BS, Software Engineering

Member, Google Developer Student Club

Tirana, Albania

2022 - 2023

Experience

CVS Health

Sales Associate

Reading, MA

Feb 2024 – Feb 2025

- Identified inefficiencies and resolved workflow in high pressure environments, applying structured problem solving.
- Executed multiple tasks at the same time, under tight time constraints with consistency and accuracy, demonstrating initiative, and discipline.

One Albania (Telecommunications)

Technical Support Representative

Tirana, Albania

Jun 2021 – Jun 2023

- Provided technical support for mobile devices, network and software issues, developing problem solving and analysis skills and handled sensitive customer data with strict adherence to privacy protocols.

Projects

AI Model Fine-Tuning

Machine Learning Course – Assigned and reviewed by Meta Engineer

- Set up and configured the model training environment for the AI model, managing installation, dependencies, CUDA optimization, and system requirements to prepare for fine-tuning.
- Fine-tuned a pretrained AI model by adjusting its generation parameters and iteratively evaluating performance and metrics to improve output quality.
- Completed project under the guidance of a guest engineer from Meta who assigned project specifications and evaluated final results.

Miller-Rabin Primality Test & RSA Key Generation

- Using C implemented the Miller-Rabin probabilistic primality test algorithm generating prime numbers in a specified range.
- Implemented a part of a small scale RSA key generation pipeline.
- Applied number theory, and public key cryptography concepts, reinforcing practical understanding of how RSA relies on prime factorization for security of encryption.

Technical Skills

Languages: C, C++, Python, Java, TypeScript, JavaScript

Systems & Tools: Linux & Unix, Git, Arduino & Raspberry Pi, Systems Programming, MongoDB, Node.js, React

Spoken Languages: English, French, German
